Get-together of retirees

Dietfurt, 17.03.2023. Thirteen retired employees met at Spangler for the first get-together of retirees. For some of them it was the first visit of the company after their retirement.

Spangler's pensioners were very happy when they were invited to the Spangler lounge for the get-together of the retirees. Thirteen former employees accepted the offer and came to the informal meeting in the company on 14 March 2023. They were warmly welcomed by the management and then informed about some current topics before talking about 'old times' and smiling about anecdotes in a relaxed atmosphere over a snack.

The retirees who haven't seen the company building for more than three years, were impressed, according to their own statement, at the large, modern new construction of the third building and how Spangler has grown. During the company tour they met some of their former colleagues and saw technical innovations.

In the course of the year, Spangler offers further days when the company will be opened to a wide public. The so-called Power Dates on 11 Mai, 13 June and 4 July are intended to show interested persons the apprenticeship and job opportunities that Spangler offers. Recently, they were extended and now also include the apprenticeships of qualified warehouse logistics specialist and qualified IT specialist for system integration.

About SPANGLER

SPANGLER Automation employs around 150 people at its headquarters in Töging in the Altmühl valley and has been a reliable partner of the national and international mechanical and plant engineering for more than 40 years.

More than half of the plants produced are exported worldwide. The medium-sized family-run company plans and engineers plant automation, programs the control technology and manufactures switch and control systems for various sectors such as environmental technology, agricultural economy, building industry, food industry, automobile industry, raw materials industry as well as renewable energies.

Moreover, SPANGLER carries out the start-up and the after-sales service of the plants.
