Employee Donation: SPANGLER Workforce Supports Family from the Region

Töging, 15 January 2026 – The Christmas donation campaign has been a long-standing tradition at SPANGLER Automation. In 2025, employees once again joined forces to support a good cause.

The campaign is organized entirely by the workforce: employees submit donation proposals, vote on them, and then fill a donation box at the company over a period of two weeks.

This year, the majority of employees chose to support a family from the region whose daughter has been suffering from severe ME/CFS (myalgic encephalomyelitis / chronic fatigue syndrome) since March 2022 - a serious form of long or post-COVID. For around two years, the young woman has been largely confined to a completely darkened room. ME/CFS is currently considered incurable and remains insufficiently researched.

In addition to providing financial support, the SPANGLER workforce also aims to raise awareness of the situation faced by many people affected by this condition. The family itself is actively involved in promoting greater awareness and research into ME/CFS.

At the beginning of the new year, the collected donation amount of €425 was presented to the young woman's mother during a personal handover at the company. With this initiative, the workforce sends a clear message of solidarity, social commitment, and strong regional ties.

About Spangler:

SPANGLER Automation, based in Töging in the Altmühltal region, currently employs 150 people and has been a reliable partner to the national and international machinery and plant engineering sectors for over 40 years.

More than half of the systems produced are exported worldwide. This medium-sized family-owned company designs and plans plant automation systems, programs control technology, and manufactures control systems for a wide range of industries, including environmental technology, renewable energy, agriculture, construction, food, automotive, and the raw materials industry.

In addition, SPANGLER handles the commissioning and after-sales service of the systems.
